

I am writing to provide comments to the FCC on the E-Rate NPRM, proceeding 13-184. E-Rate has been very important to the Chilton County School District in Alabama because it has helped our students and teachers gain access to a wealth of online resources, communicate and collaborate, and develop the 21st century skills necessary for college and career. However, E-Rate funding levels have not kept pace with my district's current bandwidth needs. I urge you to raise the E-Rate funding level to at least \$5 billion per year, which is close to the average demand level for each of the past two years.

As a Technology Coordinator for the Chilton County School District in Alabama, I know that seamlessly infusing digital learning throughout the curriculum is a prerequisite for students to graduate from high school with the skills and knowledge they need to succeed in today's global economy. Access to high-speed broadband is the key to allowing modern teaching and learning to occur in all schools across the country.

In our district we use digital learning to provide online classes, meet Common Core State Standards, administer online assessments, personalize learning and make data-driven decisions. Some examples of digital learning in my district are digital videos, digital storytelling, podcasting, online safety resources, applications that are engaging students, and applications that are meeting students' individualized learning needs. However, my district network is failing to keep up with demand, and the need for a reliable high-speed network is only going to increase in the near future.

The E-Rate program has been a phenomenal success in bringing Internet access to almost every classroom in America. In the last funding cycle, applications from schools and libraries requested a total of more than \$5 billion—twice the amount of available funding. I respectfully urge the FCC to increase funding for the E-Rate program to at least \$5 billion to meet this demand. All students need access to high-speed broadband. Our nation's future depends on their success.
